CA-1 Project: Submission Guidelines

1. At a glance

You submit **only the report online**. The report, the presentation and the implementation are all submitted **to your instructor**.

What	Where	Who submits	Format	Deadline
Project report	**Online (UMS)**	Every member, under their own login (same file)	One PDF	**Before 30 November 2026**
Project report	To instructor	One copy per group	Same PDF as online	On your presentation day
Presentation	To instructor, in class	Whole group presents	Slides (PPTX or PDF) + live talk	Presentations start in **November 2026**; your slot is announced in class
Implementation	To instructor	One per group	Code folder (ZIP or GitHub link) + live demo	On your presentation day

2. Online submission (UMS): report only

- Write the report using the **CA-1 Report Template** (separate Word file) and follow its structure.
- Upload it **before 30 November 2026**. Export it as **one PDF**; do not upload Word files, slides, code, ZIPs or screenshots on UMS.
- Name the file as in Section 5, e.g. **K3P25LH_CSE276_G7_CA1_Report.pdf**.
- Every group member uploads **the same PDF** under their own UMS login. Different files from the same group will be treated as an error.
- Open the uploaded file once to check it is the right, complete version. Compress images if the file is too large to upload.

3. Submission to your instructor

3.1 Report

- Bring or share your report PDF on **your presentation day**. The version you upload on UMS (before 30 November 2026) must be the same final version.

3.2 Presentation

- Presentations start in **November 2026**; each group's date and slot will be announced in class.

- **8-10 slides**, about **8 minutes** of talk followed by questions. **Every member** must present and answer questions.
- Suggested slides: (1) title - project, group, members; (2) the problem and who it affects; (3) source - competition, problem-statement ID and link; (4) objectives; (5) dataset; (6) method and baseline; (7) implementation / system diagram; (8) results against the baseline; (9) live demo or screenshots; (10) limitations and next steps.
- Keep text short; show figures, tables and the demo. Submit the slide file (PPTX or PDF) before you present.
- Expect questions on **your own code and results**. Each member should be able to explain every part of the project.

3.3 Implementation

- Hand over the complete project folder as a **ZIP** or a **GitHub link** (public, or shared with the instructor).
- Be ready to give a **live demo** on your laptop on presentation day.
- It must run from the instructions in its README, include the **baseline** and your **model**, and reproduce the numbers in your report.
- Do not put very large datasets in the ZIP; give the download link and steps in the README instead.

Required folder structure:

```
<Section>_<Course>_G<No>_CA1/
|-- README.md          how to install and run, dataset link, group members
|-- requirements.txt   Python packages with versions
|-- data/              small sample data, or a note with the download link
|-- notebooks/         EDA and experiment notebooks (.ipynb)
|-- src/               preprocessing, baseline, model, evaluation code (.py)
|-- app/               demo application (e.g. Streamlit), if any
|-- results/           saved metrics, tables and figures used in the report
|-- report/            the report PDF (same as uploaded on UMS)
`-- presentation/      the slides (PPTX or PDF)
```

4. Rules

- Work in the **group and on the topic allocated** in the CA project list. Changes only with the instructor's written approval.
- The **three objectives** in your allocation are what you are assessed on. Copy them into the report unchanged.
- Compare your model with a **baseline** (a simple method) - results without a baseline are incomplete.
- Cite the competition / problem statement, the dataset and every outside source (code, papers, websites) you use.
- Report **real numbers only**. Never copy results from a competition leaderboard or another project.
- If you used AI tools (e.g. ChatGPT, Copilot), say where and how in the report's declaration. You are responsible for every line you submit.
- Copied reports or code (from other groups or the internet) will be awarded zero for all members of the group.

5. File naming

Item	File name
Report (UMS and instructor)	<Section>_<Course>_G<No>_CA1_Report.pdf
Slides	<Section>_<Course>_G<No>_CA1_Slides.pptx (or .pdf)
Implementation	<Section>_<Course>_G<No>_CA1_Code.zip (or GitHub link)
Example	K3P24MK_INT396_G12_CA1_Report.pdf

6. Checklist before you submit

1. Title page shows the project title, course, section, group number, and every member's name, registration number and roll number.
2. All sections of the template are filled in; no template instructions or placeholder text left behind.
3. Objectives copied unchanged from the allocation; problem source with PS ID / link given.
4. Results table compares your model with the baseline, using the metrics named in your objectives.
5. Figures and tables numbered and captioned; references listed and cited in the text.
6. Individual contribution table filled in and declaration signed by every member.
7. Report exported to PDF, correctly named, and the same file uploaded by every member on UMS.
8. Code runs from its README; slides ready; laptop charged for the demo.
